

The Renishaw Engineering Experience

RENISHAW
apply innovation™

Renishaw and Young Engineers have teamed up to offer a fantastic opportunity to gain an insight into engineering as a career.

The Renishaw Engineering Experience is a fully subsidised five day package of activities that will give six chosen students a unique opportunity to get close to successful engineering-led organisations, meet the people behind their success, and the products that in some way have an impact on all our daily lives.

The experience which is fully escorted will visit well known engineering companies, service providers and even heritage sites. It will be an inspiring and potentially life changing experience culminating in a visit to Renishaw's award winning state of the art factory.

The Renishaw Engineering Experience is open to all full-time UK students aged 16-18 and will take place annually in late June.

Contact:

Young Engineers for further details or complete the registration form overleaf.

The Renishaw Engineering Experience

Engineers are involved in cutting edge technology in everything from jet engines and wind turbines, to mobile phones, game consoles, F1 cars and even fashion. They have a major role in helping to tackle global challenges including climate change, health and energy security. Today engineers are in great demand in the UK and with a shortage of engineers forecast for many years, there has never been a better time to consider a career in engineering.

The Renishaw Engineering Experience will give six lucky students the opportunity to see behind the scenes of successful engineering businesses and to meet engineers that are making a difference to our world. It will take place annually in late June.

To be considered you need to tell us why you are passionate about a career in engineering, what you have achieved so far and what benefit you would gain from being selected to take part in the experience.

Entry is now open and the closing date is 31 March. Selection and interviews will take place in April.

Renishaw is one of the most exciting places to work as an engineer, where its employees have the opportunity to carry out stimulating and ground breaking work in an environment that promotes innovation. The company specialises in metrology, the science of measurement, and its products ensure that companies around the world are able to improve the efficiency and quality of their processes, whether manufacturing metal components or carrying out brain surgery! Renishaw's customers include companies that manufacture aircraft jet engines, high performance motorbikes and F1 cars, but also businesses making teeth and doing research into the early detection of cancers.

Individual Submission

Please complete in BLOCK Capitals. All boxes should be completed where applicable.
