Renishaw's policy for RoHS (EU)

Renishaw's products fall into a number of different product categories according to the 'RoHS' Directive 2011/65/EU, "on the restriction of the use of certain hazardous substances in electrical and electronic equipment (recast)". All Renishaw products within the scope of 2011/65/EU, and placed on the market after the deadline for the relevant category, are compliant with the requirements of 2011/65/EU.

This directive further requires that product conformity to RoHS is communicated by means of the CE mark and associated Declaration of Conformity. As such, customers that require specific information on the status of a given product should refer to the EU Declaration of Conformity for the product in question. These can be found at www.renishaw.com/compliance or via your local Renishaw representative.

EU Directive 2015/863/EU incorporates four additional substances (phthalates) within the scope of Directive 2011/65/EU. Annex 2 of 2015/863/EU requires category 9 equipment, which includes most of Renishaw's affected product, to comply with these restrictions from 22nd July 2021. Renishaw will, of course, comply with these regulations before the relevant deadline. As noted above, compliance will be communicated by means of the Declaration of Conformity.

As the 2015/863/EU substances are also designated SVHCs under the REACH directive, Renishaw will also comply with the requirements of that directive.
