

Renishaw's 'Process to Precision' seminars - a great success!

Renishaw, the UK-based manufacturer of the new incise™ CAD/CAM system, is delighted with the success of its recent free 'Process to Precision' seminars, the latest of which took place on board HMS Belfast in London, on Thursday April 19th.

The seminars cover key areas in the importance of dental professionals' roles within the very latest CAD/CAM processes, and feature presentations from practising clinicians. Some of the key areas covered in the seminars include the clinical evidence for the benefits of CAD/CAM, the science behind good restoration fit and dental metrology. Attendees have the opportunity to meet with staff from Renishaw's Dental Products Division and discuss their unique research into the impression taking process and the benefits of the incise™ systems.

The recent London seminar was attended by more than 70 dental professionals who were impressed with the incise™ CAD/CAM system, which provides guaranteed precision fit all-ceramic restorations, and the historic setting on-board HMS Belfast, a unique 20th century battle cruiser that served throughout the Second World War.

All attendees at the seminar qualified for two verifiable hours of CPD and received a voucher entitling them to a discount off their first order for an incise™ crown or bridge, placed with an incise™ partner laboratory.
