

# Controller requirements: SupaScan

## Brother CNC-C00

The information within this document provides the minimum recommended controller requirements to enable use of the SupaScan system on a machining centre with a Brother controller.

---

**NOTE:** Part numbers and descriptions within this document relating to items provided by organisations other than Renishaw are provided for information only. Whilst every effort has been made to ensure these are accurate, contact the machine tool builder, controller OEM or distributor for confirmation before purchasing.

---

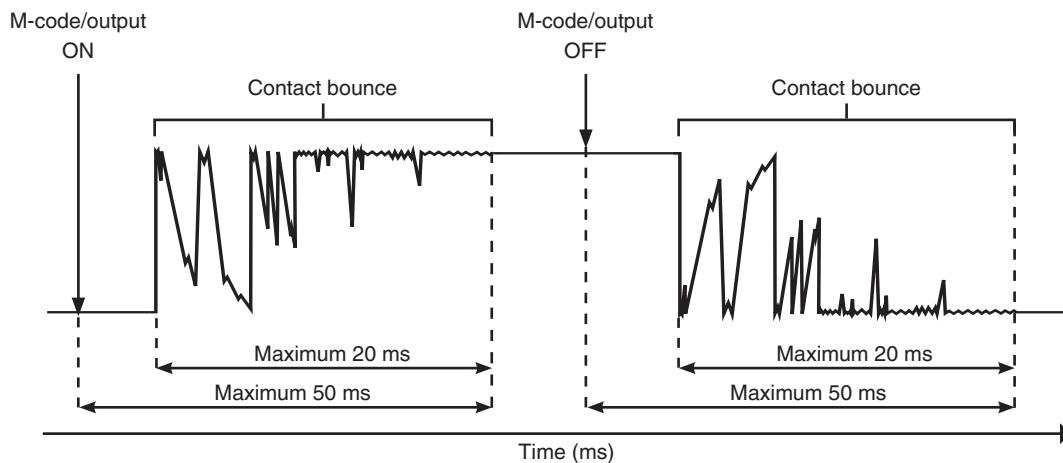

## Brother CNC-C00

2015 onwards, firmware O8.070 onwards

Controller option
1 x Ethernet port
3 x pairs of latched M-codes (high-speed digital outputs)
1 x skip (high speed or standard)
<b>OPTIONAL</b>
Interrupt macro (for overtravel protection)

Additional power supply required for the DPU-1 data processing unit.  
Contact Brother for further information and the appropriate option number(s).

## Output signal requirements

Any increase in these values will impact negatively on cycle times and may prevent the system working reliably.

The 3 x pairs of latched M-codes (high-speed digital outputs) should be reset when Reset is pressed on the CNC machine tool.

The output/input signal level change must be from 0 V to between 5 V and 30 V.

Use of solid-state relays is recommended as issues can arise from noise on mechanical relay contacts (contact debounce time of 20 ms maximum).
