

ADT View software release notes (Version 4.1.0.0)

Release date: July 2025

Changes:

- Fixed an issue where ATOM DX, QUANTiC, and VIONiC firmware versions were incorrectly displayed when using an ADTpro-100.
- Fixed an issue where the colour of min/max/pos boxes would not be updated correctly on the signal vs position plot.
- ADT View now disconnects from all ADT variants when Windows is locked or put to sleep. This is to prevent ADT View from missing required data.
- Significantly reduced CPU usage while communicating with ADTs.
- Minor bug fixes.

Known issues in this release:

- Potential graphical bug on rotary signal vs position plot, if setting trigger to “0 on Z” while already above a reference mark.
- If ADTpro-100 with TONiC/ATOM is connected to ADT View while already in calibration mode, ADT View will not display the calibration guide until re-requested.
- Attempting to copy text with hyperlinks from the software information screen can cause ADT View to freeze.
- When the language is changed, some translations do not update until the software is restarted.
