Congratulations! By reading this you are one step closer to a more natural smile.

Your dentist is most likely to recommend a Renishaw **incise™** crown or bridge if you have one of the following:

- An older, discoloured filling or crown (sometimes called a cap)
- A metal based crown with a black line at the gum line
- A damaged, decayed or cracked tooth

In any case, you'll get a brilliant result by choosing an **incise™** restoration - they are completely metal free, and offer a natural looking, safe and long lasting restoration.

Each **incise™** crown or bridge is tailor-made for you from top quality materials. The internal framework is made from ultra-strong medical grade zirconia – the same material that is used in hip replacements. This is what gives it strength and long life. State-of-the-art digital technology ensures each framework is precision-made so that it precisely fits your prepared tooth.

Your Renishaw **incise™** crown is completed by a skilled technician, who adds porcelain to the outside of the framework, carefully matching it to your other teeth to ensure a natural-looking result.

Ask your dentist whether an all-ceramic **incise™** crown or bridge is right for you. Their smile could say it all!

Why choose an **incise™** dental crown or bridge?

Fabulous aesthetics

Unlike metal-based equivalents, Renishaw's **incise™** crowns are 100% ceramic, so they have a natural, translucent appearance.

Highly bio-compatible

Clinically-proven materials encourage better gum condition. There should be reduced sensitivity to temperature and fewer allergic reactions (as compared to metal-based crowns).

Precise fit

Computer Aided Design tailors your prescription and carries out digital strength checks to provide a long-lasting restoration that comes with a 10 year guarantee*.
