ezlinknc#11 - 0 (0)**MSPCC Release Notes****mSPCC24211 - Add serial port reading code to ezLinkNC**

A new serial port interface has been added to ezLinkNC which allows data from a serial port to be routed through a Perl processing filter. This allows the conversion of data read from the serial port into any format required for further processing by other operations.

Codebase: 20071123214

ezlinknc#13 - 0 (0)**MSPCC Release Notes****mSPCC24283 - Add a RawReader to ezLinkNC and close connection if perl fails**

If reading the serial port and a Perl runtime error occurs the connection is closed. Otherwise errors can keep appearing each time the NoActivity handler is run.

A sample plugin is provided which writes the exact data of the serial port to a file. If no activity occurs within a specified timeout a new file is created.
