

Smile... first impressions last

To achieve micron accuracy in dentistry, first impressions are just the beginning...

With over 30 years experience in metrology, we are pleased to announce the arrival of the Renishaw incise™ CAD/CAM process, offering superior accuracy from the impression and die stage, right through to the final manufacture of the framework, making it a revolutionary breakthrough in dental technology.

With a brand new training facility in place at our headquarters in Wotton-under-Edge, Gloucestershire, we provide hands on tuition to ensure you leave with a lasting impression of the latest precision techniques, helping you to produce crowns and bridges that fit perfectly, first time, every time.

incise™ – the application of science to dentistry.

See us at the **DTS exhibition Coventry, 5th-6th May, stands C17 and C19**
