

# Productivity+™ Active Editor Pro

## Training modules

Welcome to the training information for your *Productivity+™ Active Editor Pro* software.

This documentation comprises a series of training modules for you to work through to familiarise yourself with the software and then retain for reference and revision as required.

These training modules provide an introduction to the key tasks required to create a probing routine, and identify the functions (and their associated icons) that can be performed, acting as a step-by-step guide through the core elements of *Productivity+™ Active Editor Pro*, from activation to embedding logic into your machining program, presented in an order that gets you up and running as quickly as possible.

In addition to the information provided in this documentation, a series of tutorials are available from within the software (select Help > Tutorials from the menu bar), and the comprehensive on-line help (Help > Contents) provides assistance on software features, and the various error and warning messages that may be generated.

To begin working through these training modules, simply select the desired document (hyperlinked) from the contents list below.

# Contents

## Training modules
